

## 'GOING-ON' @ GYVLON

SEPTEMBER 2011

Over the past months we have considered all the obvious advantages of using Gyvlon Anhydrite screed over typical 1-4 sand and cement screeds. These advantages have ranged from:

- **The thinner depths Gyvlon can achieve, so saving material and embodied energy costs**
- **The huge advantages over Health and Safety concerns for the Screeders.**
- **The efficiency of Gyvlon when used in conjunction with Underfloor heating, thus leading to cost savings both to the pocket and the environment**

There are clearly other advantages that we have already covered before, but one we have not mentioned is

### **"The Approved Screeder"**

When the installation of the screed is considered quite often the last thing taken into account is who will actually physically lay the screed. Quite often it is just part of a package with the Dry-lining or M&E packages.

At Gyvlon we feel that the skilled job of screeding is so important that our Screed manufacturing partners only supply Gyvlon to Screeders who are trained in how to install Gyvlon correctly. This training consists of a technical course in a classroom environment and then on site practical training. This means that not only is the screed manufactured to British Standard 13813:2002, but installed to British Standard 8204 part 7:2003.

So when you are considering screed for your project are you asking these simple questions?

- ? **Do you want a screed that may be 1-4 sand and cement or not?  
(There is no British Standard shovel)**
- ? **Who is auditing that you are getting what you specified?**
- ? **What safeguards do you have that you are getting what you paid for?**
- ? **Does the screed conform to any manufacturing or installation British Standard?**

When you compare Gyvlon with site mixed sand and cement screed, we think you will agree that there can be no comparison.

To help you with a more considered answer to your projects requirements, for further information or to book a CPD Presentation, please contact the Gyvlon team .
