

The challenge

To pump screed up to 47 floors and lay to an SR2 level. Required on a tight time schedule and it was imperative that the screed was delivered on time.

The solution

Gyvlon XTR and SKY liquid screed was chosen as the screed depth is thinner so therefore would dry quicker than sand and cement.

Results

The tripods were set at 2m spacing, ensuring an SR2 finish was achieved with minimal effort.

Baltimore Wharf

Type of Project:

High-rise Apartments

Date:

16th January 2016

Location:

Canary Wharf, London

Applied m²:

40,000 m²:

Technology applied:

Gyvlon XTR and
Gyvlon SKY

Substrate:

50mm thick floating floor on
insulation.

Screed supplier:

Tarmac, Silvertown

Screedlayer:

TCS
