

The challenge

The challenge here was the timescale, originally specified as sand cement but the contractor needed a faster application due to a tight build program.

The solution

Gyvlon ECO flowing screed allowed a floor to be poured per day greatly reducing the build program and enabling 'follow on' trades to be back working in the area a couple of days later.

Results

3-Rivers Housing Association

Type of Project:
Apartments

Location:
Durham

Technology applied:
Gyvlon ECO

Substrate:
Beam & Block
8mm resilient layer
40mm Gyvlon
