

The challenge

The client requested an improved surface finish requiring minimal preparation before the final floor covering was installed, to help to reduce the build program.

The solution

Gyvlon SP - a skin-free screed solution

Results

50mm Gyvlon SP skin-free screed offers an improved surface finish without affecting the drying time, unlike some low laitance products.

The screed will only require a light buffing to remove site contamination and provide a key for the final finish, therefore reducing the likelihood of requirement for the screed layer to return.

IES Cables

Type of Project:

Commercial, new offices

Date:

June 2018

Location:

Stockton

Applied m²:

600 m²:

Technology applied:

Gyvlon SP

Screed supplier:

Tarmac Darlington

Screedlayer:

Tarmac Flooring
