

## The challenge

Refurbishment of an old mill, using electrical underfloor heating.

## The solution

50mm Gyvlon screed incorporating the electrical underfloor heating

## Results

The Gyvlon screed was easily pumped into the upper and subsequent floors speeding up installation compared to sand cement screeds. The design also maximised the effectiveness of the underfloor heating, whilst complying with Part E of the Build regulations.

## Urban Splash

### Longlands Luxury Apartments

#### Type of Project:

Refurbishment

#### Location:

Stalybridge

#### Substrate:

Existing mill concrete floor, insulation  
Electric underfloor heating  
50mm Gyvlon

#### Others:

Used electric Underfloor Heating
