

## The challenge

To provide a quicker drying screed than normal, enable a swift turnaround and have the barn ready to be used as a holiday let for the upcoming holiday season.

## The solution

Gyvlon **ECO FD** which dries twice as fast as standard flowing and traditional screeds.

## Results

Drying times reduced by at least a half meaning floor covering could be laid early; ensuring the holiday let was ready in time.

## East Greystones Farm, Darlington

### Type of Project:

Self Build, Barn Conversion

### Date:

07 February 2020
