

## The challenge

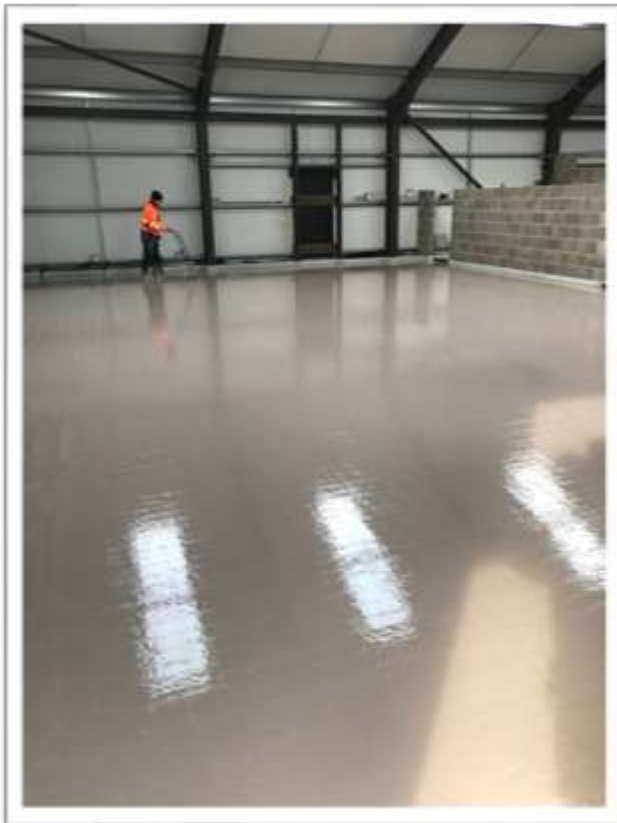

A thin section screed was required for a first-floor converted farm building to help reduce the dead load and level the precast beams to achieve a flat level surface.

## The solution

Readymix Gyvlon **Excelio**, was laid unbonded at a minimum of 20mm thick.

## Results

300m<sup>2</sup> completed in one day to SR1 surface finish/flatness saving the customer time, money and the requirement for the screed layer to site mix hundreds of bagged levelling compound.

## Mansell Trackway

### Type of Project:

New Build

### Date:

October 2018

### Location:

Dunkeswell, Devon

### Applied m<sup>2</sup>:

300 m<sup>2</sup>:

### Technology applied:

Gyvlon Excelio

### Screed supplier:

Glendinning

### Screedlayer:

Lidstones
