

## The challenge

This Pub/Restaurant required a quick turnaround to reduce downtime in construction, with depths of screed of up to 70mm and floor coverings required after 6 weeks.

## The solution

Gyvlon **ECO-FD**, dries significantly faster than traditional screeds and can be laid at depths of up to 80mm product.

## Results

120m<sup>2</sup> completed with a skin free finish that did not require initial sanding to remove laitance and was ready to receive floor coverings well within the given timeframe.
