

## The challenge

To help to reduce the build program the client required an improved surface finish that required minimal preparation before the final floor covering was installed.

## The solution

Gyvlon **SP** the skin free screed solution

## Results

50mm Gyvlon SP skin free screed offers an improved surface finish without affecting the drying times like some low laitance products.

The screed will now only require a light buffing by the final floor layer to remove site contamination and to provide a key for the final finish reducing the requirement for the screed layer to return.

## Locking Parklands

### Type of Project:

Commercial New School

### Date:

December 2019

### Location:

Weston-super-mare

### Applied m<sup>2</sup>:

520 m<sup>2</sup>:

### Technology applied:

Gyvlon SP

### Screed supplier:

Tor Glastonbury

### Screedlayer:

Certus Construction
