

## The challenge

A faster drying screed was required to be used over a Lewis metal decking system on a first floor. Lewis Decking is a lightweight flooring system which has good strength, sound and fire ratings ideal for first floors; giving a thin section, lightweight floor.

## The solution

Gyvlon **XTR FD** is compatible with the Lewis Deck system and provided reassurance to the client that their 6-week deadline would be achieved comfortably.

## Results

The floor was dry and ready for floor coverings after 28 days.
