

## The challenge

The customer required a level floor with no laitance and as few movement joints as possible in an underfloor heating screed.

## The solution

Gyvlon **Thermio SP**, the project was 600m<sup>2</sup> with underfloor heating and had 3 heating zones which enabled the floor to be constructed with only just 2 joints,

## Results

Our SP gave a skin free surface finish without the need for removing laitance. Large floor areas were poured in a day without any unwanted cracking; and greatly reduced joints allowed better flow covering.

## St. Dunstan Church

### Type of Project:

Commercial Church Building

### Date:

September 2019

### Location:

Birmingham

### Applied m<sup>2</sup>:

600 m<sup>2</sup>:
