

The challenge

The client required a thin level floor for this former BBC building as its use was being changed to offices and a workshop and they didn't want any joints.

The solution

Readymix Gyvlon Excelio bonded at an average depth of 20mm

Results

This resulted in a fantastic looking floor, all poured and finished in one morning, enabling foot traffic the following day.

No site mixing, and no bag packaging to dispose of - greatly reducing the embodied carbon content of the floor compared to bagged /cementitious products.

Treforest Ind. Est.

Type of Project:

Former BBC, Treforest

Date:

February 2021

Location:

Treforest, Nr. Cardiff

Applied m²:

850 m²:

Technology applied:

Gyvlon Excelio

Screed supplier:

Flowmix

Screedlayer:

UK Screeds
