

The challenge

Old Frankie and Benny's restaurant refurbishment into two fast food outlets.

Screed required to level the old unit after new services were installed; originally planned for 30mm unbonded but issues with levels meant a thinner screed was required.

The solution

Gyvlon Excelio due to it been able to be bonded from only 12mm, fast/ cost effective solution for large areas.

Results

450m² poured using two ready-mix truck deliveries on the same day leaving the floors finished to SR1, ready for following trade 24/48hrs afterward.

Ready-mix Excelio screed poured from 15 to 30mm thick levelling the industrial unit to the require datum, no cracks or curling ready for the following trades.

By using ready-mix Gyvlon Excelio flowing screed the contractor saved time, money, waste and the environment compared to bagged products.

Frankie & Benny's, Scunthorpe
